Open Access Statement

Open Access Publication Intentions

I, Auric, confirm that the manuscript "Information Ontology: Rewriting the Foundations of Physics" is intended to be published as a fully open access article in Science journal. I acknowledge that this choice will facilitate maximum global dissemination of the research findings, allowing unrestricted access to researchers, educators, policymakers, and the general public worldwide.

Open Access Funding

The article processing charges (APCs) for open access publication in Science will be covered by the following funding sources:

1. **Primary Funding Source:**
   - The Universe Institute Open Science Publishing Fund
   - Fund Identifier: UIOSF-2025-0142
   - This institutional fund specifically supports open access publication of high-impact research
2. **Secondary Funding Source:**
   - National Science Foundation Advanced Theoretical Physics Program
   - Grant Number: NSF-ATP-2023-047856
   - This grant includes specific allocation for open access publication costs

I confirm that sufficient funds have been secured and approved for this purpose, and that financial limitations will not prevent open access publication of this work.

License Preference

For this manuscript, I select the **CC BY 4.0** license (Creative Commons Attribution 4.0 International), which allows: - Unrestricted sharing and redistribution of the material - Adaptation, transformation, and building upon the material for any purpose - Commercial use of the content

This license choice reflects my commitment to maximizing the reuse potential of this research while ensuring proper attribution to the original work.

Repository Archiving Plan

In addition to publication in Science, the manuscript and supporting materials will be archived in the following repositories:

1. **arXiv.org**
   - Preprint version posted prior to submission
   - Final peer-reviewed manuscript to be updated post-publication

2. **Universe Institute Institutional Repository**
   - Complete publication package including supplementary materials
   - DOI-linked with persistent identifier
3. **Open Science Framework (OSF)**
   - Complete research materials, including simulation code and data
   - Project DOI: 10.17605/OSF.IO/XRYZ9

Data and Code Availability

In alignment with the open access commitment, all research data and simulation code associated with this manuscript will be made freely available through: - GitHub repository (https://github.com/universe-institute/information-ontology) - Zenodo archive with DOI assignment - Supplementary materials included with the published article

Additional Open Access Considerations

I acknowledge Science's open access policies and requirements, including: - Immediate open access upon publication (no embargo period) - Compliance with funders' open access mandates - Inclusion in Science's open access portal and database - Open access to all figures, tables, and supplementary materials

This commitment to open access aligns with my belief that fundamental research on the nature of reality should be freely accessible to all, fostering collaborative advancement of scientific understanding.
